

AI Uses in Placement Readiness

#	Scenario	What the Student Does	What AI Helps With
1	Resume Tailoring	Pastes a job description + current resume	Rewrites bullets to match keywords, improves ATS compatibility
2	Mock Interview Practice	Shares role and company name	Simulates HR/technical interviews, gives feedback on answers
3	Cold Outreach Drafting	Provides recruiter/alumni details and target role	Writes personalized LinkedIn messages or referral emails
4	Aptitude & Reasoning Prep	Requests questions at a specific difficulty level	Generates fresh practice questions and explains solutions
5	Pre-Interview Company Research	Inputs company name and role	Summarizes business model, recent news, competitors, and culture
6	Self-Introduction ("Tell Me About Yourself")	Shares background in bullet points	Crafts a polished 90-second intro tailored to the role
7	Technical Concept Revision	Asks about DSA, system design, DBMS, etc.	Explains concepts simply, uses analogies, runs quiz sessions
8	Offer Letter & Salary Negotiation	Shares offer details and market expectations	Breaks down CTC, benchmarks against market, drafts negotiation email

Permitted Uses

1. Using AI to tailor resume language and structure to match a specific job description
2. Practicing mock interviews by asking AI to simulate HR or technical rounds
3. Asking AI to explain technical concepts, DSA problems, or system design principles for learning
4. Using AI to research a company's background, culture, and recent news before an interview
5. Drafting outreach emails or LinkedIn messages with AI and then personalizing them yourself
6. Asking AI to generate aptitude or reasoning practice questions for self-study
7. Using AI to understand an offer letter's CTC breakdown or compensation structure
8. Getting AI feedback on your spoken or written answers to improve clarity and structure

Prohibited Uses

1. Submitting AI-generated resumes or cover letters without any personal review or customization
2. Using AI to answer questions in real-time during a live interview or online assessment
3. Asking AI to solve coding test problems and submitting those solutions as your own during a proctored test
4. Using AI to fabricate projects, skills, or experiences you don't actually have
5. Copying AI-written answers verbatim for group discussions or written rounds without understanding them
6. Using AI to impersonate yourself in asynchronous video interviews or written submissions
7. Sharing confidential placement question papers with AI tools, violating college or company NDAs
8. Relying entirely on AI-generated company research without verifying facts, risking misinformation in interviews
